SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL
AI/LLM: gLangChain, LangGraph, LangSmith, CrewAI, LlamaIndex, Fine-tuning
RAG/Agents: Voice Agents, AI Agents, RAG, Embeddings, Vector Search, Re-ranking, Tool Calling, Structured Outputs, Memory, Guardrails
Backend: FastAPI, Node.js, NestJS, Express.js, REST APIs, WebSockets, Async Jobs, Redis Queues
Data/Vector: PostgreSQL, MongoDB, Redis, Pinecone, Qdrant, pgvector
MLOps/Cloud: AWS, Docker, Kubernetes, GitHub Actions, LangSmith, RAGAS, LLM Evals, Tracing, CI/CD, Observability

SUMMARY

AI Engineer / Applied GenAI developer with nearly 2 years of hands-on software and AI experience including internships, building voice agents, AI agents, RAG workflows, and LLM-backed services. Strong in prompt engineering, tool calling, structured outputs, retrieval design, LLM evaluation, REST APIs, Docker/AWS, CI/CD, observability, and cost/latency optimization. Built AI services for 10k+ requests/day with 30% lower latency and 40% fewer deployment failures.

WORK EXPERIENCE

- AI Engineer – Octify Technologies

Jan 2025 - Jun 2026

 - AI Engineer Intern at Octify Jan 2025 - Jun 2025; converted full-time in Jun 2025 and built voice-agent workflows for AI calling and sales coaching using LLM prompts, tool calling, JSON outputs, and validation.
 - Built RAG workflows with embeddings, vector search, retrieval filters, and business/product context to improve AI answers for coaching, outreach, and engagement use cases.
 - Developed agentic AI automation for lead generation, SEO monitoring, WhatsApp/Twitter engagement, and outreach using API tools, async jobs, Redis state, retries, and failure isolation in NestJS.
 - Improved LLM flow reliability with prompt versioning, fine-tuning support, guardrails, fallbacks, traces/logs, RAG checks, and cost/latency tracking for 10k+ requests/day.
- Product Research Intern – Filo Edtech

Sep 2024 - Nov 2024

 - Built an internal feedback automation tool to collect, parse, categorize, and summarize multi-channel user feedback, reducing research cycle time by 32%.
 - Analyzed onboarding and feedback data, found 3 high-friction points, and helped improve retention by 5%.
- Backend Developer Intern – Get Now Solutions Pvt Ltd

Apr 2024 - Jul 2024

 - Profiled PostgreSQL query paths in CRM APIs, fixed N+1 access patterns, and added indexes, reducing p95 latency from ~800ms to under 200ms.
 - Stabilized REST APIs by finding root causes of recurring failures and reducing backend bug rate by 40%.

PROJECTS

- Jobbound - AI job analysis and resume-tailoring assistant | Link: <https://jobbound.vercel.app/>

 - Built an AI job-analysis assistant that fetches jobs, deduplicates listings, compares JDs with resume content, scores fit, finds gaps, and suggests tailored resume changes.
 - Designed structured LLM scoring with schema outputs, pre-LLM filtering, token-cost controls, zero-repeat checks, failure isolation, exports, and apply-readiness review.

EDUCATION

Echelon Institute of Technology
BCA – Data Science | CGPA 7.7 | 2022-2025
